

ABSTRACT

The invention relates to a device for easy and fast arrangement of ornaments in the hair, such as jewels. The device 1 substantially includes a loop 2, 10-11,
5 preferably pointed at one end 3 and crimped at the other end 4 with a crimp 6. The loop cooperates with ornaments and/or "active elements" 7 consisting substantially of a support 8 designed to be threaded or otherwise pinched or arranged on or around said loop 2 and the ornament itself 9, which is integral with said support. Said
support 8 is threaded onto said loop 2, a lock of hair is passed into said loop, the
10 support 8 holding the ornament 9 is transferred (by sliding it along said loop 2), onto said lock of hair, and said device 1 is removed.
